### Low VOC Matte and Semi-Gloss Clearcoat System

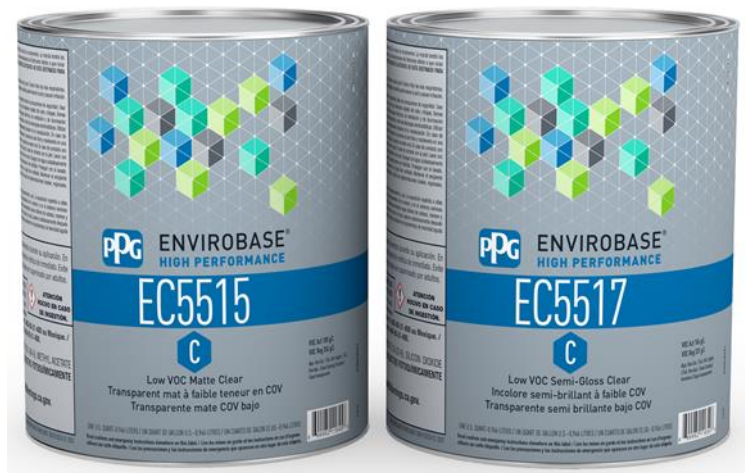

EC5515, EC5517

#### Product Information:

The 2.1 Low VOC Matte and Semi-Gloss Clearcoat System consists of two versatile 2K acrylic urethane clearcoats designed to reproduce a range of low-gloss levels for the specialized repairs of vehicles originally finished with a low-gloss clearcoat over a single or multistage basecoat color system (e.g. BMW<sup>®</sup>, FIAT<sup>®</sup>, LAMBORGHINI<sup>®</sup>, or MERCEDES BENZ<sup>®</sup>). To allow for the normal gloss variations due to color, model, position or repair on the vehicle, the mix of the two clearcoats can be varied to match the existing vehicle finish to be repaired. EC5515 and EC5517 or mixes of the two may also be used over rigid plastics without the need of special additives.

#### Features & Benefits:

- Simple 3:1:1 mix ratio
- Uses ECH5075 hardener and DT1855 reducer
- Versatile for small and large jobs
- Excellent, consistent flow – horizontally or vertically
- Smooth after bake
- Exceptional durability
- 5 gloss levels
