

AQUABASE® PLUS COLOR VARIANT SYSTEM

WATERBORNE-SPRAYED CHIPS DELIVER PRECISE COLOR ALIGNMENT FOR ACCELERATED PROCESS PERFORMANCE

As the centerpiece of color tool support for the *Aquabase Plus* system, the color variant system contains more than 6,500 prime and variant color chips, arranged chromatically to provide a wider range of variant choices independent from the vehicle's actual manufacturer. Since each chip is sprayed with actual *Aquabase Plus* paint, users are ensured of the best possible alignment between the color chip selected and color formula to be sprayed.
